

Creative

Make your own miniature garden. You can be as creative as you want with any materials or try with real plants.

Maths

Work with an adult to draw around your foot so you have a nice clear outline. (Take your shoe off first!) Cover your foot outline with 1p coins. Make sure your foot is completely covered! How much is your foot worth? Suppose you try 2p coins. How much is your foot worth now? Or 5p coins...? Can you do 10p coins? Record what you have found out.

Art

Collage
Go on a leaf and twig hunt and use your findings to create a nature collage.

English

Choose a plant to research and write 10 interesting facts about it. Present your work in an interesting way.

Growth and Green Fingers

Our topic this term is called growth and green fingers, the children will be learning about their local environment and especially the plants that grow in it. Complete as many of the activities as you can with your child by 21st May and please share them by putting them in their homework book, bringing in the finished product or by uploading photos or short videos to Tapestry.

Thank you for all the hard work you put in on the Robots topic. The robots were fantastic and made a great display not just in the classroom but also in our school entrance hall!

Science

Plant Hunt

Go on a plant hunt around your garden or your local area. What plants can you spot? Maybe take some pictures or draw pictures of the plants you find.

Grow a plant and keep a plant diary to track the progress of your plants. Fill it with drawings and sentences to explain what has been happening.

Reading and Phonics

Please continue reading with your child every day. The phonics play website has some good free games and activities that will support your child's learning in phonics.
